

Parts of a Flower and Their Functions

A Fun & Easy Science Guide for Kids

Meet the Flower Parts!

Flower Part	What is its job? (Function)	Memory Trick!
■ Petal	Brightly colored leaves that invite bees, butterflies, and birds to visit the flower.	Pretty petals attract!
■ Sepal	Small green leaves at the base that protect the flower bud before it opens up.	Sepals protect the bud!
■ Anther	The tiny yellow sacs at the top of the stamen that make and hold sticky pollen dust.	Anther = Pollen maker!
■ Filament	The thin, thread-like stalk that holds up the anther so pollinators can reach it.	Filament holds it high!

■ Stigma	The sticky landing pad at the very top of the flower center that catches pollen grains.	Sticky stigma catches pollen!
■ Style	The long tube connecting the stigma down to the ovary where pollen travels.	Style is the pollen highway!
■ Ovary	The safe little room at the base of the flower that holds the baby seeds (ovules).	Ovary turns into fruit!
■ Ovule	The tiny eggs inside the ovary that grow into seeds after getting pollen.	Ovule turns into a seed!
